01 / THE PRODUCT

Your work. Paid. Delivered. Recoverable.

MUSD checkout for digital products, with access tied to the buyer's verified wallet.

Publish

Upload a file, set a MUSD price and share a checkout link or website button.

Pay

Buyers authorize MUSD payment directly to the creator on Mezo testnet.

Recover

Return with the same wallet and download a paid purchase again.

paylink-omega-three.vercel.app

02 / PROBLEM AND AUDIENCE

A payment should not become a lost file.

For creators selling PDFs, templates, guides, images and ZIP files to wallet users.

Buyer friction

A closed tab or dropped connection can leave a paid buyer unsure whether to pay again.

Creator friction

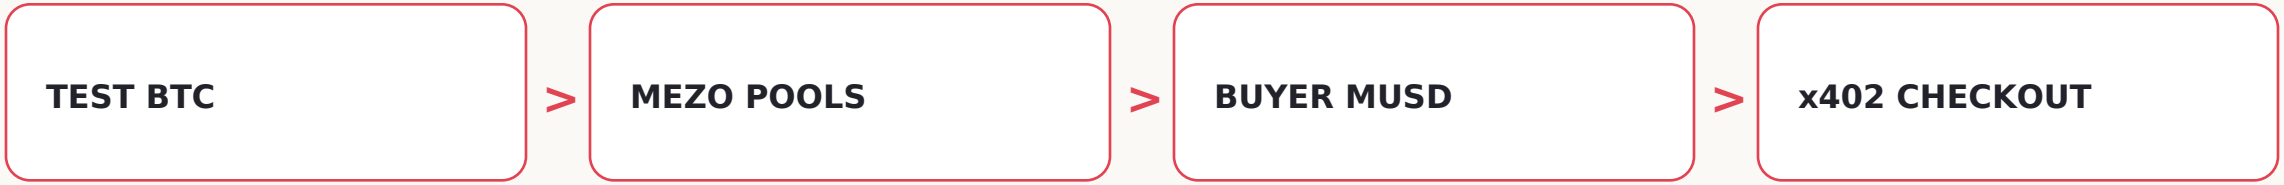
A payment link alone does not connect settlement, private delivery, purchase recovery and seller records.

PayLink connects the complete purchase: publishing, payment verification, private delivery and a reliable way back.

03 / MEZO INTEGRATION

Get MUSD at the point of checkout.

Wave 1: real x402 MUSD settlement. Wave 2 implementation: integrated BTC-to-MUSD funding via Mezo Pools.



The buyer reviews BTC input, expected MUSD and minimum output. The app verifies router, pool, token pair and reserves, then requests exact approval and a separate swap.

READ CHECK PASSED: pool identity, liquidity and a real quote verified at block 16485495. A completed wallet swap is still pending.

04 / TECHNICAL DESIGN

Verification before delivery. Recovery before retry.

Next.js + TypeScript on Vercel; Supabase Auth, Postgres and private Storage.

Identity

Supabase verifies wallet sign-in. Protected server routes enforce ownership of products, orders and downloads.

Payment

Saved authorizations, settlement locks and global receipt claims bind payment to one product or plan order.

Delivery

After three confirmations and matching MUSD logs, buyers receive short-lived private download links.

A submitted payment that times out stays recoverable. The app does not automatically create a replacement charge.

05 / BUSINESS MODEL

Free to start. A paid plan for growing creators.

A concrete sustainability model paid in MUSD; no buyer surcharge and no automatic renewal.

FREE / 0 MUSD

Up to 3 products. Includes private files, checkout links, purchase recovery and seller receipts.

CREATOR / 3 MUSD for 30 days

Up to 25 products. Payment goes to the configured PayLink treasury. Entitlement activates once after verified settlement.

Existing products and buyer downloads remain accessible after expiry. Treasury configuration and live plan payment testing are required before claiming this flow verified.

06 / VERIFIABLE EVIDENCE

A payment judges can inspect themselves.

Wave 1 judges independently traced the product payments to the seller wallet.

07 / NEXT STEPS AND LINKS

Prove the new flows with real users.

Keep a clear distinction between implemented code, automated checks and completed live acceptance.

1. Complete a real testnet swap and Creator plan payment; publish both receipts.

2. Run independent creator and buyer pilots; document friction, fixes and consented feedback.

3. Update the demo and evidence manifest before the Wave 2 submission.
